

6.2.5 Scan for Open Ports from a Remote Computer

Lab Report

Time Spent: 05:37

Score: 4/4 (100%) Pass

Passing Score: 4/4 (100%)

TASK SUMMARY

Required Actions & Questions

- ✓ Use ssh -X to connect to the remote computer
 - ✓ Use Zenmap to scan 192.168.0.0/24
 - ✓ Q1: Which computers are web servers?
 - ✓ Q2: Which server has a port open that allows unencrypted text communications?
-

EXPLANATION

Complete this lab as follows:

1. Connect to the network using the rouge system.
 - a. From the Favorites bar, select **Terminal**.
 - b. At the prompt, type **ssh -X 192.168.0.251** and press **Enter**.
 - c. For the root password, type **1worm4b8** and press **Enter**.
You are now connected to Rogue1.
 2. Scan the network using Zenmap.
 - a. Type **zenmap** and press **Enter** to launch Zenmap remotely.
Zenmap is running on the remote computer, but you see the screen locally.
 - b. In the Command field, type **nmap -p- 192.168.0.0/24**.
 - c. Select **Scan**.
 3. Analyze the scan results and answer the questions.
 - a. From the results, find the computers with ports open that make them vulnerable to attack.
 - b. In the top right, select **Answer Questions**.
 - c. Answer the questions.
 - d. Select **Score Lab**.
